Variety	Maturity Size	Growth Rate	Description
<b>Shrubs</b>			
Cranberry, American	10'-12'	Moderate/Fast	Dark green leaves turning red to maroon in fall. Numerous, white, flat-topped clusters in June followed by showy red fruit that persists into winter.
Redosier Dogwood	8'-10'	Fast	Attractive red stems with creamy-white flowers followed by white berries. Red twigs provide winter color. Tolerates most any location, growing in moist soils and in sun or shade. Excellent wildlife food source and cover. Prune out older stems to maintain best stem color.
Hazelnut, American	15'-18'	Moderate	Shade tolerant. Produces edible nuts eaten by birds and mammals. Variable fall color. Can reproduce by suckering
Juneberry (Serviceberry)	6'-15'	Moderate	Most popular for its fruit production. Expands by suckers. Prefers loam to sandy loam with high organic matter. Limited drought tolerance. Will not sustain in ponded conditions.
Elderberry	5'-12'	Moderate	Large, multi-stemmed shrub. The leaves are dark green. Produces white flowers that are clustered into large, flat-topped cymes. In late summer, the flowers become purple-black elderberry fruit.
<b>Deciduous Trees</b>			
Hackberry	40'-60'	Fast	Tall, wide spreading crown. Has a scaly or warty bark. Produces dark purple fruit. Grows best in well drained, moist soils. Excellent cover and food source for wildlife.
Red Maple	40'-60'	Moderate	Saw toothed lobed leaves. Shade tolerant, grows in very wet to dry conditions. Leaves can turn red, yellow or orange in fall.
Sugar Maple	60'-80'	Slow	Produces dense, oval crown and bright fall colors ranging from yellow to orangish red. Needs well-drained loamy soils. Not tolerant to wet soils. Shade tolerant.
Bur Oak	50'-80'	Slow/Moderate	Has simple lobed leaves and produces acorns. Good for wildlife. Tolerates a variety of soil types.
Red Oak	50'-70'	Moderate	Simple lobed, bristle-tipped leaves. Red or brown fall leaf color. Good for wildlife. Prefers deep, rich soils. Long-lived and fastest growing oak.
White Oak	50'-70'	Slow/Moderate	Does best on slightly moist to well-drained sites. Full to partial sun. Acorns provide excellent wildlife food source. Brown, purple autumn foliage. Valuable wood products tree.
Black Walnut	50'-75'	Fast	Tall with deeply fissured brown bark. Important timber tree. Prefers moist, well-drained soils. Produce a hard shelled nut. Good for wildlife.
Black Chery	50'-80'	Fast	Most noted for its attractive summer foliage and fall color. Fragrant white flowers in the spring. Flowers are followed by drooping clusters of dark purple-black cherries. *Black Cherries are poisonous to animals in general; consider not planting these near horses. Most poisoning comes from eating the wilted leaves.
<b>Conifers</b>			
Dark Green Arborvitae (potted)	20'-50'	Moderate	Vigorous growing, pyramidal tree developing a broad base. Has scale-like foliage which retains its dark green color year round.
White Pine	50'-80'	Moderate/Fast	Needles in group of 5. Pyramid shaped when young, broadening with age. Prefers sandy or silt loam soils, but will tolerate a wide range.
Red (Norway Pine)	75'-80'	Fast	Long needled, pyramid shaped tree. Prefers well-drained sandy soils. Popular Christmas tree species
Black Hills Spruce	40'-50'	Slow/Moderate	Noted for its dark green foliage and conical form. Prefers heavier soils, adequate moisture and clean cultivation. Drought tolerant.
White Spruce	50'-75'	Medium	Cone-shaped crown. Dark bluish-green needles with white waxy coating. Prefers fertile soils and is tolerant of most light conditions. Good wildlife cover.
Norway Spruce	40'-100'	Fast	Pyramidal tree with drooping branches. Hardy. Does best on moist to sandy, well-drained soils. Partial shade to full sun.
<b>Other items</b>			
Tree Mat with 5 staples	3' x 3' with 5 staples		Mat greatly reduces weed competition, reduces maintenance time and increases soil moisture.
Fertilizer Packet (18-9-9)	A small packet filled with a pre-measured amount of fertilizer that is placed alongside the seedling at time of planting.		
Bee Lawn Seed Mix	5 lbs.	Cover 1000-1500 sq.ft.	Mix of fine-fescue grasses and flowers. Provides high quality nutrition for bees and other pollinators. Mow at least 3" high and refrain from mowing when flowers are blooming.
Tubex Combitude treeshelter w/ stake	5ft tube with stake	Designed for more exposed sites, the Tubex Combitude combines the benefits of a solid base for improved establishment and reliable protection, with a ventilated upper section, allowing the tree to acclimatize before emerging from the shelter.	
Rain Barrel (DIY Kit)	Pre-drilled 55 gallon plastic barrel, parts packet and assembly instructions.		

**\*Note: This is general information about each tree and growth characteristics. Life expectancy will depend on the care and weather conditions.**
